- Automated application deployment.
- Sybase database administration (log and space management).
- Sybase backup & recovery.
- Sybase database design and layout for maximum performance.
- Pro-active database monitoring via event-driven tools and scripts.
- Sybase Transact SQL coding. Sybase Consulting Support.

The ASE 15 Migration Strategy Service Package is designed to provide a Migration Plan document including an assessment of the impacted components in the customer's ecosystem, and a Migration Project Plan providing details on the migration tasks. The effort is tailored to the customer's environment for enabling the planning process for a successful migration based on best practices while mitigating inherent risks.

The Service Package is delivered by our senior consultants who draw upon best practices from the combined knowledge base within InfiOp. The strategy not only covers getting the customer's existing environment on to the new version, but it focuses on minimizing risks related to unexpected downtime that is often seen in migrations due to poor planning and/or lack of understanding of new features.

The key tasks to preparing a thorough plan for the migration of ASE to version 15 include:

- Identifying Critical Success Factors of the migration and strategies to achieve them
- Reviewing the Database Server and its ecosystem from the bottom-up. The components reviewed include:
  - Operating System
  - I/O subsystem
  - Dataserver
  - Databases and objects
  - Integration technologies
  - Operational procedures
  - Applications
  - Scripts and procedures
- Preparing a high level Migration Strategy document

## Deliverables & Activities

The Deliverables from this Service Package are:

- Migration Plan Document
- Assessment of impacted components
- Pros and cons of various migration options
- Implementation recommendations for upgrade strategy and roadmap
- Best practices tailored for their environment
- High Level Migration Project Plan

Proper planning is essential to a successful migration effort. The customer will receive a comprehensive evaluation and a roadmap of how to migrate to ASE 15 specific to their existing infrastructure.

## Our ASE Migration Strategy suite

- Reduces the risk of migration as the product expert will identify items which will impact the success of the effort.
- Reduces the risk of migration as proper planning is complete with impact analysis and contingency planning.
- Reduces labor costs as best practices often illustrate more efficient methods of migrating the servers.
- Our product expert will identify items which will impact the success of the effort, as well as outline contingencies in planning, reducing the risk of migration.
- Best practices will often illustrate more efficient methods of migrating the servers, reducing labor costs.
- We are uniquely positioned to help our clients drive maximum value from their ASE investments.
- Our consultants are highly trained on the latest versions of the software, have experience with all types of environments and access to all internal resources to resolve any issues that may arise during an upgrade.
- Our pools of experts are at the forefront of knowledge in ASE and Replication Server configuration, and have helped thousands of customers achieved better results.
